

PRODUCT

One context.

Orders, inventory, product data, and the systems around them — connected.

LEARA.SE

Leara sits between the systems you already use.

Not a replacement stack. A shared layer where information meets —
ERP, e-commerce, POS, payments, logistics.

Connective layer

LEARA · UNIFIED CONTEXT

PLATFORM ARCHITECTURE — CONNECTIVE LAYER

CAPABILITIES

01

Orders

Multi-channel order flow in one place.

02

Inventory

Stock visibility across stores, warehouses, and channels.

03

WMS

Warehouse operations connected to the same context.

04

Product data

Structured product information where systems need it.

05

Integrations

ERP, e-commerce, POS, payments, logistics — connected, not replaced.

06

Customers

Shared customer context across channels.

07

Operations

Day-to-day commerce work in one operational view.

When information meets, what becomes possible changes.

AI is developed as an integrated part of Leara — helping users understand information, identify what needs attention, and move from insight to action faster.

Not AI beside the work.

Intelligence where the work already happens.
